

Page 25 - The Dump Cart and Hay Truck

ISSUE: <u>Issue 11</u>

Published by Ronald Caplan on 1975/6/1

Roddy told us that before the cart and truck and the large spoked wheels came to the farra, they used to make a trolley for hauling manure. The wheels were sliced frora a hardwood trtmk about 20 inches in diameter • the finished wheel about 6 inches thick. A hole would be bored through at the center and a wooden axel passed through. The trolley had two wheels but as it was low to the ground, it was not built to durap. You shoveled into the siraple box, and you'd shovel out. The shafts would have a curve something like the rough drawing here. For the hay they wouir use a sleigh (essentially a drag) with " runners 9 or 10 feet long • the longer the better • and" straight shafts I"Ci,,,,' "r as sho m in the i '''Y""" • ''"SSL photograph. There • ' ' " would be three beams nailed across the runners. The sleigh was a lot easier to to load with hav than the hay truck but "'i because it v'as so low it was just that much harder forking the hay up in the barn. Roddy is seen in the photograph coraing in with a sleigh-load of hay, three others there to do the tramping and the horse, Ruby, something like fifty years s'o. Cape Breton's MAGAZINE Dog 1 Edited & Published by Ronald Caplan JUNE 1974 WRECK COVE CAPE BRETON NOVA SCOTIA Correction; In issue Nuraber 10, the article "The Sinking of the 'Caribou' Ferry." we used the name Thoraas Pearcey.
