Join the Fun! CAPE BRETON • The Cape Breton Winter Festival is being staged for the third time in February and March of 1991 among eleven municipalities of the Island. • The response from people within the community was again beyond all expectations. Last year there were a total of 450 events and 60,000 people directly involved. • The objective of the Festival] is to create fun-filled winter activities that can be enjoyed by people of all ages and interests. • Sport, recreational, and cultural activities will be presented by the municipalities involved, and we encourage you to get out and enjoy some of these events. • Some of the regional activities for 1991 include: , An Tulloch Gorm presents a Concert Series at U.C.C.B. Children's Activities Heritage Day Series at U.C.C.B. Fortress Louisbourg • A Day of Skiing and Sledding at Ben Eoin • and other traditional activities If you or your group want further information or would like to stage an event, contact your local:

Why you can tell a clarinet from a piano. They're all built at the same overtone structure. A structure of overtones built in harmonic series, which is based on the same simple ratios we talked about earlier, that also give us our musical intervals--just, you know, the consonant intervals that we build our musical structures out of--is the same structure that exists within each tone. So, in a way, when I'm thinking about these instruments, I'm trying to express all of these aspects in one. We've got the structure of our musical convention, the structure of acoustical tone--you know, just taking it symbolically, kind of as our aesthetic principles. And just a sense of harmony in nature, as expressed through science, or just our ability to reason about what's happening. So I'm kind of thinking about all of these things at once. (And you're making a fiddle or a mandolin or a guitar.) Exactly. But you know, I kind of intend it to be expressive of all these ideas that I'm working with.... (Have you ever made an instrument that

didn't fit the harmonic principles?) Oh, yeah, sure. I made quite a few instruments before I really focussed on these ideas that we are talking about. My first instruments, I would just kind of take a guess--well, what seems to be right? what's a good shape? I'd kind of draw something out and design it and work with it like that, or maybe modify it from one to the next. I made quite a few. And not all the ones I make now are designed according to these principles. That's one idea that, over the last few years, I've been quite involved with--designing some of these instruments.... But once I have the design and I work with the instrument, I try not to become a slave to the design. That's the starting point. From there, then I'll see how the thing works.
