Published by Ronald Caplan on 1995/6/1

March 1904 had its centre in southwestern New Brunswick and was felt in the Sydney area, so it probably also affected northern Cape Breton, which is no farther from the epicentre (Woodman, 1908; Leblanc and Burke, 1985; Ruffman and Peterson, 1988). More likely it was the quake of 20 December 1909 which was centred in the Inverness/Whycocomagh area (Mcintosh, 1913) and had an estimated magnitude of 4.0 (Smith, 1962). Newspapers reported that it was felt at many points on the island, but not at Ingonish (Ruffman and Peterson, 1988). There were, however, no published reports of any kind from the Aspy area because it lacked direct communication with the outside world at that time, so we cannot be sure whether it affected the area of the slide and may have been its cause. If only someone from the Aspy Valley area could remember experiencing the earthquake or, better still, have knowledge of the landslide itself. Does your family have memories of stories about the Aspy Landslide? You can contact Doug Grant by writing to Cape Breton's Magazine, Wreck Cove, Cape Breton, NS BOC 1 H0. Or you can contact Doug directly at Geological Survey of Canada, 601 Booth St., Ottawa, ON K1A0E8. DON'S FLOWERS Serving Port Hood, Judique, Inverness and Surrounding Areas p. O.
